warranty or you have questions about replacing parts, contact the fitness customer support quest at 1-800-321-9236. You can order and pay for spare parts with a credit card over the phone. Customer service center opening hours Monday through Friday, excluding public holidays, from 8:30 a.m. to 6 p.m. ET, as of March 2011. Have the name of your Gazelle Glider model as well as information about the problem and the part that is broken. Email your latest option for contact fitness quest for Gazelle Glider spare parts by emailing customer service. Email customer service directly (customersupport@fitnessquest.com) or fill out an online form on the Fitness quest website. The form asks for your name, email address and provides a section for you to write in your question or request. The website states that a customer service representative will respond within one to three business days. Map site Latest web magazine site updates (s) Website AUTHOR TONY Little's Gazelle Freestyle Elite log user 5-25-07: My Broken Gazelle In recent weeks the piston power on my Gazeli has given more problems, but so far, not all I couldn't live on. Yesterday though, my left piston completely blew up, so now it's like there's no piston there at all. Which basically makes the whole car useless. And the right got progressively weaker too (and leaking liquid a few months ago). But I could still get a decent workout as long as I left on the left Functioned. The blow was a pretty noticeable dynamics wise. Enough to hurt someone. My exercises usually last about 40 minutes a day, and can be quite energetic. A few days ago I noticed the resistance of the left piston wavered some. Then in the last couple of sessions that fluctuations have become extreme. Where sometimes there was no resistance at all, and sometimes the resistance briefly become very large. When this happened during the session, sometimes it would be like the foot pedal would go wild, trying to throw me. I will have to consciously fight to control the excessive movement of the platform. It was very annoying. Anything that draws your attention to the fact that you use the simulator is bad: it's easier to go through a chore if you can casually dream or brainstorm while exercising rather than. Now all of a sudden I'm without a simulator. No quick fix in sight. It's happened to me before. Shortly after the initial purchase, one piston had to be replaced. I was lucky though, and they sent me a free because the machine is still under warranty (?) Naturally, this time I Googled to replace parts using various alternative search terms for parts and the name of the model machine. I was amazed to find no options what would be for this. Even though websites offer some new model machines for sale, don't display anything about selling spare parts. Egades! So I removed the now dead pistons from the machine completely, and the jury flogged some bungee cords between the front of the frame, leaning on the floor, and individual foot platforms. Figuring out to give him the full test the next day - how I managed to get maybe 90% of the day session out of the car before the piston blew. Theoretically, bungee cords will work. A brief sampling test showed that they wouldn't be nearly as handy as real motion-wise pistons, but they'd give me maybe enough resistance to be helpful. I'm mostly worried about the catastrophic failure of cords where bits of metal end hooks came off and were thrown on my face or towards others that might end up in close proximity at the time. But there were some additional measures that I could take to do this - if the cords proved capable of performing at all. This morning I climbed aboard Gazeli and tried the cords. I very quickly realized using cords was going to restrict my freedom of movement/step on the machine, and dramatically speed up the pace. As my foot is pumping the movement should be reduced and higher in frequency. Well good. I thought I could get used to it. Plus can actually get a tougher workout at a higher speed. And I was still considering setting the Pistons to maximum resistance before they left. Most of the time I was in Gazeli, I supported medium-range resistance. But not even two in the session, the cords began to shred. Or at least their outer coating is made. And I thought I'd better not push them any So I re-Googled the problem, dug up the phone number, and called it. I got a robot saying I called outside of work time (apparently I was talking to California, where people are just now waking up). I waited a while and called again. It turned out that the room was for those who didn't exactly deal with Gazelle equipment but could give me a number of who did. I always repeat these numbers to check, and I write everything, because I hate delays. Then I called the new number. There is a service response that didn't sound right - like a drink or jelly company. But people who sell Gazelle also do healthy food and supplements, so I thought maybe I'm still on the right track. But I wasn't. Somehow I called the wrong number. So I went back to the internet. The guy who may have given me the wrong number also told me the Fitness quest was the mother Gazelle. And I was familiar with that name from a long time ago related to the machine. So I found them online. Scoured their website looking for spare pieces of information to find exactly not. We found our customer service number. It was only one digit from the number the other guy gave me. So close to the same I almost don't catch the difference. So I called the corrected number. And the third time today hit my credit card down on the table, in case I could afford to place an order. Notice I have a lot of time listening to Muzak here, wait, wait, wait to talk to someone ... I finally got to a living person and explained what I was after. I had to go find a serial number from the bottom of the Gazelle foot pedal to place the order. Both pistons together will cost \$52.61 including taxes and shipping, and may take as long as two weeks on business days to arrive (or three weeks in real time). Yikes! Yes, I think it's quite expensive. But it was expected. Exploration. And it would take so long, I could find an alternative solution before they ever arrive. I sure would like to falsify some solution that made me independent of Fitness forever, and kept the machine functional and comfortable indefinitely, without periodic mass outages lasting a week....
