Gajau Whisker is a craft component in the world of monster hunters. It is used to make various low-level armor and weapons. Description: Gajau material. It's a carving. Hardy, used to make equipment. Location: Gajau Whisker falls out of the following small monster fish: Gajau (Ancient Forest, Wildspire Waste) It falls only on a low rank (1-5 stars)! You can defeat these monsters as often as you want to farm Gajau Whisker, they respawn when traveling quickly to another card. For all other crafting materials, check out our Monster Hunter World Wiki. Monster Hunter World Gajau Scale isn't something you need to worry about in the later stages of Capcom's action hit RPG, but your first ten hours or so may require you to grab a couple of these elusive materials for some different crafts and quests. Unlike the big monsters, you haven't officially introduced these som with as creatures, so knowing how to get the Monster Hunter World Gajau scale isn't always as straight forward as it may seem to the veterans of the series. Fortunately, we know the exact location of all the Gajau scales you might ever need! Monster Hunter World Gajau Scale are a potential cut from Gajau. These are large soma creatures that inhabit wildspire waste water. If you're sure you've hit around a lot of these aquatic species before without getting a single scale, it's probably because you're playing in the wrong mode. The Monster Hunter World Gajau scale could have been from expeditions, research, or when almost any hunting in Wildspire waste. They're always there. But Gajau Libra has only fallen on the High-Rank Gajau - a view you'll only find when playing on High-Rank. Carving Gajau on a low rank will reward only Gajau Skin and Gajau Whisker. Fight them in High-Rank and you'll find Gajau Libra and Grand Gajau Mustache there instead. What is the Monster Hunter World Gajau scale used for? So what is the Monster Hunter World Gajau scale even for, anyway? Being a high-ranking drop means you'll only really need them for high rank armor and weapons, but their low rank equivalent (Gajau skin) is used at the beginning of the Fish Day delivery mission, so there's a chance that you may need a scale or two of something even later down the line. Monster Hunter World Gajau Scale is mainly used to produce Gajau gears, but only parts of Gajau are used in Jyuratodos gears, too. Considering Gajau is more or less a small Jyuratodos and lives most of his life in the company of one, it's not too surprising. If you want to use water weapons - a great choice against monsters like Toby-Kadachi, Urugaan, and Teostra, we might add - you'll want to stock up on these materials as soon as you get the chance. You will surely need them to upgrade or two down the line. These evil scribes form groups to protect their territory from intruders and aggressively protect their habitat. Gajau can be found in ponds in the Ancient Forest and Wildspire waste. Their materials can be used to make gajau boots. The contents of the show Gajau Physiology have greenish scales with orange dorsal fins. They look like a som. In its initial appearance in the third generation, they were classified as fish. In World, Gajau was originally classified as Piscine Wyverns before being changed back to Fish with a patch on April 19, 2018. The behavior and abilities of Gajau vicious predatory fish; is one of the few species of fish to attack hunters in the third generation. In the fifth generation, Gajau even jump out of the water to capture the prey. Gajau are able to jump out of the water and attack hunters on land. Once on land, Gajau will slowly drag himself back into the water. Game Appearance Monster Materials Item Title Rarity Value Description Gajau Skin咬魚皮 4 220z Gajau material. It's a carving.
